We have placed the transparent lid on three of the devices. Liquid nails (clear glue) was used to place our transparent lids onto the device. We also placed symbols for the buttons under the transparent lid. There is a up, down, enter, and home symbol buttons. I need to make one more transparent lid because my dog grab a hold of one of the four transparent lids I made. We have also placed a strap onto one of our devices and is very comfortable to wear. I think Mrs. Cao will be very pleased with our device and will help her students learn about our body's biology.
