We ordered the fiber optics components near the beginning of September. I had a few issues with some extra details needed for the parts. After finally getting the correct parts ordered, I ordered the fiber optic cable. The cable came in last week and was not what I was expecting. The rest of my parts came in this past week, but I have not had a chance to pick them up from Mrs. Stacie yet. I need to do this ASAP in order to find out if I need to order a different type of fiber optic cable.

I spent several hours trying to put together the parts I ordered for the fiber optics system. The Bare fiber optic adapter needs an extra coupler that I did not order. I looked into the cost of the coupler, and it cost an additional $20 per coupler. I found an alternative option which I am looking into now. These parts are closer to $50 for the whole setup compared to to $140 for the whole setup. These components are made for a hobbyist communications expert, but they are perfect for our purpose.
