Monday Oct 8, Meet as a group to start construction of our test space. Cleared the corner of the room where we are going to set up our test space, then measured out the 10 ft by 10 ft space. Once the space was measured we then divided up the space into 2 ft square sections and laid tape on the ground to identify the space. Then went over as a group what we needed to bring on wed to finish the test space.

Wednesday Oct 10, showed up to work on the space but no one else could make it.

Sunday Oct 14, Met as a group and constructed our center column that we will use to build our sample point database and test it. Then measured the book shelves in the room and decided that we need to put our microphones about 1 ft above the top of the shelves. Also, our mic cords are not long enough to reach the test space so we are going to need to bring in some longer ones.
