This past week we had Milestone 2. We spent a lot of time finishing up the electronics enclosure, designing the LCD enclosure, testing the solar panel/battery, mounting the panel, and making sure everything with the LCD was functional and operating as we like. We made the enclosure from wood, drilled holes in the roof of the cart and bolted the solar panel on top, and also tested it to make sure it was fully functional and we also tested the regulator to make sure it would be sufficient.
